Education

Northeastern University Boston, MA

Bachelor of Science in Computer Science, Systems Concentration *Expected May 2029*

- GPA: 3.72/4.0
- Relevant Coursework: Algorithms and Data, Foundations of Cybersecurity, Object-Oriented Design, Mathematical Foundations of AI, Discrete Structures

Experience

Quality Assurance Summer Intern May 2026 – Jul. 2026

Phoenix Electric Corp. *Canton, MA*

- Designed an AI-assisted workflow to analyze Local Control Cabinet (LCC) electrical drawings and estimate 2,000–4,000+ landed wire connections per cabinet, reducing manual counting time by approximately 75%
- Validated the workflow across 20+ cabinet drawing sets representing 40,000+ connections and generated highlighted review PDFs to help engineers verify counts and investigate flagged results
- Iterated through 300+ workflow versions to reduce miscounted connections and improve overall detection reliability
- Prototyped a separate workflow to extract cabinet nameplates and device labels from AutoCAD-exported PDF/DXF drawings into GravoStyle-ready CSV files, with checks for ambiguous text, duplicate entries, and formatting errors

Research Assistant Feb. 2026 – May 2026

Northeastern University *Boston, MA*

- Used structured prompts to process biotechnology and pharmaceutical market data with ChatGPT and organize generated results for research use
- Reviewed generated results and cross-checked suspicious or inconsistent information against original sources to identify errors

Projects

LCC Connection Count Estimator | *Custom GPT, Document Analysis, Validation* Jun. 2026 – Jul. 2026

- Built a prompt-driven Custom GPT pipeline that generalized across 5+ LCC cabinet types, identifying eligible technician-wired connections to support labor and timeline estimates
- Cross-checked flagged connections against engineer-confirmed eligibility criteria to improve the reliability of labor estimates
- Defined page-selection, count-scope, source-exclusion, and endpoint-tracing rules to distinguish eligible technician-wired connections from non-countable sources

Personal Portfolio Website | *React, JavaScript, HTML, CSS* Jan. 2026 – Present

- Built a personal website to showcase software projects, experience, and photography work
- Used React components and custom styling to organize content into responsive pages

Technical Skills

Languages & Web Technologies: Python, Java, JavaScript, TypeScript, HTML, CSS
Frameworks: React
Tools: Git, GitHub, SQLite, Adobe Lightroom, Adobe Photoshop
Technical Concepts: Object-Oriented Programming, TCP/IP Networking, Applied Cryptography, AI-Assisted Automation

Additional Experience

Freelance Photographer Mar. 2024 – Present

Freelance *Quincy, MA*

- Photographed and edited sports, portrait, and landscape work for 30+ clients and events using Adobe Lightroom and Photoshop

Team Member Jul. 2023 – Apr. 2025

Space Zero *Braintree, MA*

- Trained a new team member on daily procedures, customer service, and point-of-sale operations
- Frequently led shifts and was trusted with manager-level POS access to perform advanced transactions and system functions
